1. The device is a power-required device, meaning it will not work till it is powered. If your networks should be active all the time, please consider using UPS (Uninterrupted Power Supply) for your device. It will prevent you from network data loss or network downtime.
2. In some area, installing a surge suppression device may also help to protect your FSD-504HP from being damaged by unregulated surge or current to the FSD-504HP or the power adapter.

- 6 -

Step 4: Connect your Fast Ethernet High Power PoE Switch to network devices.

- A. Connect one end of a standard network cable to the 10/100Mbps RJ-45 ports on the back of the Fast Ethernet High Power PoE Switch.
- B. Connect the other end of the cable to the network devices such as printer servers, workstations or routers.

Step 5: Connect your Fast Ethernet High Power PoE Switch to PoE PD devices.

- A. Connect one end of a standard network cable to port 2 to port 4 10/100Mbps RJ-45 ports on the back of the Fast Ethernet High Power PoE Switch.
- B. Connect the other end of the cable to the 802.3at / af powered devices.

- 8 -

Cable distance for Switch

The cable distance between the FSD-504HP and PC / PD devices should not exceed 100 meters for UTP/STP cable.

Make sure the wiring is correct

It can be used Category 3/4/5 cable in 10 Mbps operation. To reliably operate your network at 100Mbps, you must use an Unshielded Twisted-Pair (UTP) Category 5/5e cable, or better data grade cabling. While a Category 3 or 4 cable may initially seem to work, it will soon cause data loss.

Step 6: Supply power to the Fast Ethernet High Power PoE Switch.

- A.** Connect one end of the power cable to the Switch.
- B.** Connect the power plug of the power cable to a standard wall outlet.

When the Switch receives power, the Power LED should remain solid Green.
